Declaration of Compliance to Rohs 2015/863/EU (RoHS III)

Dear Madam or Sir,

We confirm that all products currently delivered to our customers are compliant with the latest Rohs regulation 2015/863/EU (RoHS-III) from July 22, 2019.

For plating of all tin (Sn) surfaces, we use anode material according to TEC-100-1268-2 of Tyco which defines high purity Sn anode material and/or with a certificate stating the Pb content is below 50 ppm.

Please note that this declaration is valid only for material, which is not explicitly and intentionally ordered deviant from the a.m. regulation by the customer.

E.g. it is not valid for all products intentionally plated with tin-lead (Sn-Pb) (i.e. drawing or order form demands a Sn-Pb-surface).

In this case, it is up to the customer himself to represent the deviation to his own customer.

I am the responsible person and your contact partner in all concerns of REACh and RoHS as well as conflict minerals declaration for Diehl Metal Applications.
In case of further questions, please contact me.

Yours faithfully

Diehl Metal Applications GmbH

Your RRC Team
